1. International Telecommunication Union (ITU)

I. Support to promotional and operational activities

Any activity that brings about human resources development and the improvement of national or regional capacity is potentially a promotional activity for TCDC even though that activity had not been conceived specifically for TCDC purposes. The Union believes that most of its training programmes and seminars will help promote TCDC. Over the reporting period promotional activities were:

At the Harare Africa Telecommunications Development Conference (December 1990), a paper was presented explaining the TCDC modality of technical assistance and urging its increased use by the developing countries especially since funds for technical assistance are diminishing in real terms. Telecommunication equipment from the South was also exhibited to encourage South-South cooperation.

II. Measures taken (or planned) to strengthen the organization's supportive role in promoting TCDC

The Union's financial base is set out in its budget, which gives a special allocation to promote TCDC activities. The focal point which has been "part time" will remain that way but will be strengthened under the restructuring of the Union which is now under way. No legislative enactment of TCDC is embedded in the Union's Convention at the moment. Sectoral counterparts are hard to come by at the country level.

III. Use of developing countries' capacities

Procurement of goods and equipment from developing countries is on the increase and is being encouraged as a matter of policy. Telecommunications being a highly specialized and fast-changing technology; only a handful of developing countries can provide the equipment to meet the standards required for world-wide connection.

Other developing countries either look down on equipment from their region or prefer field-proven equipment from the North.

For the recruitment of qualified experts, the Union is turning more and more to countries that have now reached a stage of adequate development in the field of telecommunications. Brazil and India constitute two good examples of countries which have become sources of valuable expertise.

Looking at another aspect of this trend, consulting firms located in developing countries were awarded contracts in the framework of international bidding (e.g. RASCOM).

In addition, ITU would like to quote two global figures relevant to its regular budget for TCDC only: 1989, $14,000; 1990, $23,200. Other TCDC activities took place (e.g. project 9/HON/88/003) but quantitative data are not at hand at present.

2. International Maritime Organization (IMO)

Section I

Support to promotional and operational TCDC activities

Promotional activities. IMO, UNDP and the Government of Argentina have cooperated in the development and implementation of the first Programming Exercise in Maritime Activities for Latin America and the Caribbean, from June 1988 to September 1989. Public and private-sector entities of 21 countries undertook to share maritime expertise in the context of 120 TCDC projects approved at the Regional TCDC Meeting held in Buenos Aires in September 1989. Projects deal with protection of the marine environment, maritime safety and accident prevention, and related aspects of shipping and ports. A similar Programming Exercise is currently under consideration for the Asia and Pacific region.

Operational activities. A great number of developing countries are involved in the sharing or exchange of maritime technical resources in the context of national and regional maritime education technology projects, as well as the Programming Exercise in Maritime Activities for Latin America and the Caribbean. A project for the integration of women in maritime activities drawing on TCDC inputs is currently under development.

Problems encountered. The Handbook on TCDC, currently under preparation, will help overcome the lack of widespread knowledge about the concept, potential, usefulness and cost-effectiveness of TCDC, particularly as regards private and public-sector maritime entities with little or no contact with the United Nations development system. Further, obtaining feedback on the implementation of TCDC activities which may have been initially promoted by IMO is difficult in the case of maritime entities taking over the organizational and management activities by themselves. As such, these developments are positive but they do pose problems when attempting to review in aggregate terms the progress made under TCDC modalities.

Measures to strengthen the organization's supportive role in promoting TCDC. The organization's technical cooperation activities are entirely financed out of extrabudgetary donor contributions, and there is no financial base for TCDC as such. Within available means, and in collaboration with organizations of the United Nations system and recipients, every effort is made to service promotional TCDC activities. At the project formulation stage, the review of all potential TCDC inputs is well established, and has led to an increasing number of TCDC exchanges of experts and consultants in technical maritime fields. The organization reports periodically on developments in TCDC to relevant IMO intergovernmental bodies, such as the Technical Cooperation Committee, Council and Assembly, as well as other relevant forums.

3. International Fund for Agricultural Development (IFAD)

Summary assessment

This section briefly describes the IFAD Technical Assistance Grants (TAG) Programme which represents the Fund's increasing efforts in supporting National Agricultural Research Systems (NARS), with the objective of strengthening their capacity to address aspects of agricultural research with a focus on the rural poor and the mitigation of the technological constraints to their resource-poor production systems.

I. Support to promotional and operational TCDC activities

The importance of establishing a close linkage between research and extension (with the close participation of the farmer beneficiaries in the technology system) has led to the Fund's adoption of the principle of closely linking adaptive research to a corresponding development project. Such systematic linkages are now a fundamental feature of all current research grants supported by the Fund. All these grant-supported projects illustrate the importance of international technical cooperation through collaborative research networks involving linkages established between and among national development programmes for the achievement of greater impact on the rural poor smallholders - who constitute the main beneficiaries of the technologies generated as a result of such technical cooperation. This cooperation fostered through the Fund's intervention has benefited a number of national research programmes which, otherwise, found access to externally developed technology a major constraint to the generation of improved technologies indigenously.

II. Measures taken to strengthen the Fund's supportive role in promoting TCDC

In the initial years, the Fund followed the procedure of receiving specific research project proposals for strengthening NARS through technical cooperation, from agricultural research centres for review, selection and subsequent support, as appropriate. However, in order that its specific concerns and thrusts are adequately reflected IFAD has assumed the responsibility for the preparation of certain specific grant proposals. It has been successful in formulating a number of projects in the past two years, which have been acknowledged to be highly innovative in design and focus on IFAD specificity, and which have, as a result enjoyed substantial cofinancing support from interested donors.

With a grant amount totalling $US 12 million approved in 1990 for six TAG research and development programmes, the Fund has been able to mobilize roughly $US 50 million worth of cofinancing. Thus, a substantial amount of resources were made available from non-IFAD resources, to address research issues of direct relevance to the Fund's operations as well as to channel these resources towards the institutional strengthening of developing country

NARS. In addition, innovative research and training programmes were also designed under the auspices of IFAD, in the past year in order to strengthen manpower resources in the developing regions. The Fund's successful experience in designing these programmes has encouraged it to consider increasing its involvement in the conceptual and preparation stages of planned research programmes through its technical assistance grants operations.

III. Use of developing countries' resources

Among the models of research collaboration at the regional level, IFAD has consistently adopted those that serve to strengthen developing country NARS. Until recently, the grant programmes have been based on conventional collaborative research network models which foster technical cooperation between NARS. The Fund has come to recognize, however, that there exist some NARS in developing countries which have developed to the point where they could assume greater research and training responsibilities, as well as contribute directly to strengthening other national programmes (akin to South-South technical cooperation). IFAD considered this an opportunity to increase the momentum of the global research effort through encouraging NARS to strengthen their own capacity to mobilize resources for their sustenance. The Fund is therefore assisting NARS in achieving a sustained flow of resources through providing support to various research programmes which can make it "attractive" for developing country Governments to allocate more resources towards these programmes.

IV. Innovative approaches to TCDC

The transfer to national programmes of some of the research and training initiatives which are currently the responsibility of international centres is one of the innovative approaches to TCDC which the Fund has adopted to strengthen NARS capabilities. The Fund is specifically promoting an innovative collaborative initiative through CIMMYT (Grant No. 201) which involves the decentralization of some research and training responsibilities of CIMMYT (International Maize and Wheat Improvement Centre) to devolve onto the National Agricultural Technology Institute (INTA), Argentina.

V. Review of IFAD's support for agricultural research grants, 1990

The main thrust of IFAD's technical assistance grant support for research in 1990 has continued to be on the generation, assessment and diffusion of sustainable agricultural technologies through the Fund-financed ongoing research programmes, most of which are based firmly on the concept of TCDC given the regional collaborative research effort being supported. The technical assistance grants, approved during the year, also maintained IFAD's specificity by reinforcing its emphasis on research and development of traditional and other food crops, and livestock which contribute to the sustenance of vulnerable, resource-poor and often landless, beneficiary groups.

The food crops focus in 1990 was on the collaborative (networking) research and development of the date-palm and cassava, both of which are widely considered as extremely important traditional crops in some of the most marginal agro-ecologies. In the context of the traditional food-tree crop, IFAD's grant is supporting an intervention to rehabilitate production in the date-palm subsector crippled with disease and declining yields, with crucial economic implications for the rural poor in many developing countries in the Near East and African region, for whom the food-tree crop remains the mainstay of existence and also constitutes a critical factor of environmental protection in oases ecology.

Through IFAD's new support to the cassava research and development programme, small farmer beneficiaries in the drier tropical and the subtropical areas of Africa, Latin America and Asia would derive enormous economic benefits from the introduction of appropriate cassava varieties, hitherto unknown in these ecologies. The links developed between the various national research programmes and the Fund-financed investment projects would catalyse efforts to distribute improved cassava varieties with desirable traits of drought and pest resistance, long-term underground storage capabilities and low-input requirements, especially in areas which have a great untapped potential to produce cassava and thus contribute to food security.

In the field of livestock research, the stress was on the most under-researched traditional domestic animal, the camel, which has an important role to play in the livelihood of the rural poor who traverse the deserts and other arid zones. IFAD's initiative to promote regional collaborative research on the dromedary is in response to the need to consolidate, streamline and strengthen the sporadic camel research efforts currently ongoing in camel-producing countries. The multi-purpose role of the camel as a milk and meat producer, draught animal and means of transport as well as its adaptability to harsh climatical conditions, meets the requirements of the nomadic pastoralists in regions where it could make a very significant contribution to environmental stabilization.

Through that grant, IFAD envisages substantial gains to be reaped in terms of acquiring better knowledge and understanding of traditional livestock systems and their propensities to respond to a dynamic economic environment which necessarily dictates changes in production patterns. The emphasis of the Fund's intervention remains on applied research in order that it may contribute to the development of practical recommendations to ensure herd health, methods of improving livestock productivity at the field level (within the framework of resource-poor conditions) and improvements in the processing and marketing of livestock products - without disturbing, to the extent possible, the sociological basis of the traditional livestock systems being addressed.

Another theme which was given major importance was training, a critical means of institutional strengthening and innovation. As part of research and training programmes, the training activities addressed research scientists and

technicians in regional and international agricultural research centres drawn from among those who are familiar with small farmers' production systems. These scientists would be involved in research undertakings which respond to specific problems faced by smallholder wheat producers in areas covered by IFAD-funded projects. IFAD's grant is supporting fellowships based on the group training concept with a view to foster closer cooperation and communication between scientists and institutions of different developing countries, and with those in IARCs (international agricultural research centres).

4. International Atomic Energy Agency (IAEA)

I. Support to promotional and operational TCDC activities

The IAEA continued to implement projects with sizeable TCDC components within the framework of two regional cooperative agreements in Asia (RCA) and in Latin America (ARCAL). At the design stage of new projects those components which could be implemented on a TCDC basis were identified. Also on the occasion of regular regional working group meetings member States were encouraged to assist in the implementation of such projects. It is worthy to note that participating developing countries made considerable in-kind contributions to project activities, including payment of travel and per diem by host countries of training courses to participants from other countries. In addition, a special project on the promotion of TCDC in Asia was established in 1989 which was financed by the IAEA's Regular Fund. In the Latin America region the IAEA organized a meeting under the ARCAL programme which was held in Buenos Aires in November 1990 and which was funded by the participating countries and the Special Unit for TCDC.

African member States of the IAEA have since 1988 been considering the establishment of a regional arrangement for cooperation in the field of nuclear science and technology in Africa similar to the arrangements in Asia and Latin America. In February 1990, the African Regional Cooperative Agreement (AFRA) was endorsed by the IAEA Board of Governors and the Inaugural Meeting of AFRA's Technical Working Group was held in Cairo in September 1990. To date nine African countries have acceded to it: Algeria, Egypt, Kenya, Libyan Arab Jamahiriya, Madagascar, Morocco, Nigeria, Sudan and Tunisia. It is foreseen to tap the already existing potential in certain countries and to make it available to other States in the region where such expertise is needed. In addition, all planned AFRA activities emphasize the establishment of capabilities which will in turn lead to a further strengthening of the bonds of mutual collaboration.

II. Measures taken to strengthen the IAEA's supportive role in promoting TCDC

During the last biennium, IAEA undertook a more systematic exploration of TCDC possibilities for implementing selected parts of projects. The TCDC focal point within the IAEA is the Programme Coordination Section, which is involved in the programming process of technical cooperation activities and alerts the programming staff to include TCDC elements into projects whenever possible.

III. Use of developing countries' capacities

With regard to experts and training course lecturers originating in developing countries, a satisfactory share within the total technical cooperation programme was achieved by the IAEA. In respect of equipment it has to be reiterated that the high technology nature of most of the equipment

required imposes a certain limitation on the procurement from developing countries, especially since such supplies have to meet the recipients' and the Agency's requirments in terms of safety and cost; nevertheless, with expanding manufacturing capacities in developing countries, an upward trend in procurement from this source can be observed.

5. United Nations Conference on Trade and Development (UNCTAD)

Support for the expansion of trade and economic relations among developing countries has been one of the main themes of UNCTAD's work since its creation. The related areas of TCDC, in the sense of promoting the sharing of experience and technical capacities among developing countries, is also an important feature of UNCTAD's technical cooperation activities. This is reflected in the large number of intercountry projects (more than two thirds of UNCTAD's technical cooperation expenditure in 1989-1990) whose common charcteristic is precisely to promote exchanges of skills and experience among developing countries.

However, statistical and financial reporting on TCDC activities by UNCTAD has been constrained by a lack of precision as to what types of UNCTAD technical cooperation properly qualifies as TCDC. The most recent interpretation offered by the report of the Group of Governmental Experts on TCDC (DP/1990/77, para. 8) has not, in UNCTAD's view, clarified the situation for operational and reporting purposes. Consequently, this progress report, like the previous ones, can only be illustrative, rather than comprehensive; and the statistical data should be treated with care: since many TCDC-related activities overlap with each other, the statistical section is confined to 1(a), i.e. strengthening of capacities for TCDC, an objective that runs throughout much of UNCTAD's technical cooperation.

I. Support to promotional and operational TCDC activities

As already indicated, the majority of UNCTAD's technical cooperation programmes involve activities where developing countries have the opportunity of sharing or exchanging experience and skills . The following are a few illustrative examples where, in addition, developing countries have taken an active role in managing and financing such activities in 1990.

(a) The TRAINMAR programme (training activities in the maritime sector) involves cooperative arrangements between institutions in developing countries, including the exchange of instructors and training materials. In 1990, for two TRAINMAR projects, in West Africa and Latin America respectively, several developing countries have made financial contributions to enable the further strengthening of the TRAINMAR network in their subregion.

(b) Developing countries continued to cooperate among themselves in the Group of 24 on international marketing issues. Financial contributions of $100,000, to an UNCTAD-executed project, by several developing countries have supplemented contributions from UNDP and IDRC (International Development Research Centre).

(c) UNCTAD has continued its support to the Global System of Trade Preferences (GSTP). The GSTP project has provided for exchange of information and technical expertise among participating developing countries in the implementation of the scheme. The GSTP support project is financed by the

Perez-Guerrero Trust Fund, managed by UNDP on behalf of the Group of 77. In addition, in 1990, six developing countries made direct contributions to UNCTAD amounting to $81,500 to the GSTP support project.

(d) Under an UNCTAD-executed UNDP-funded regional project for least developed and island developing countries in Asia and the Pacific, a seminar on technology transfer and management was organized from 2 to 15 December 1990 for the participating countries. The Government of the Philippines (which is not a participating country in the project itself) made a substantial contribution to the seminar by hosting it (in Manila), providing seven resource persons, logistic and secretarial services and organizing field visits to national institutions.

(e) Technical skills and experience are often embodied in computer software, the use of which features increasingly in UNCTAD's technical cooperation programmes, notably in the areas of customs administration and debt management. In the course of installing such computer systems in developing countries and testing them, they are regularly being enhanced and adapted. Technicians and users in developing countries play an important part in this process, and often initiate it. The new features and capabilities developed in a particular country or subregion are then made available freely to other developing countries, and thus contribute direct sharing of experience.

II. Measures taken (or planned) to strengthen the organization's supportive role in promoting TCDC

The Joint Technical Cooperation Unit, attached to the Secretary-General's office, as part of Executive Direction and Management, is the UNCTAD focal point for TCDC. In order to improve UNCTAD's understanding of what activities properly qualify as TCDC, UNCTAD has invited the Special Unit for TCDC to cooperate in enhancing the organization's capacity to support TCDC activities in the area of trade and development and to facilitate mutual linkages between ECDC and TCDC in view of the complementary responsibilities of UNCTAD and UNDP in this regard.

III. Use of developing countries' capacities

The main input in UNCTAD's technical cooperation projects consists of technical personnel. The use of expertise from developing countries has continued to be an important characteristic of UNCTAD programmes. For instance, in 1990, out of 27 long-term project personnel (excluding associate experts), 18 were from developing countries. Procurement of equipment and supplies is relatively limited and, for most of the items (computer hardware and vehicles), sourcing from developing countries is usually not possible or practicable.

6. United Nations Development Programme (UNDP)

Introduction

1. In accordance with the responsibilities as a lead organization within the United Nations development system, UNDP has endeavoured, in association with the other organizations of the system, to promote TCDC and to provide catalytic support for operational TCDC activities. The sources of finance for these activities are primarily the country, regional, interregional and global indicative planning figures (IPFs) established by the Governing Council. In addition to the IPFs, the Council has since 1979 approved funds from Special Programme Resources (SPR) for the promotion of action-oriented TCDC activities, including information support and exchange regarding TCDC potentialities.

UNDP support for TCDC during the biennium 1989-1990

2. UNDP expenditures for TCDC activities fall into two categories: (a) funds allocated for the support of country and intercountry projects executed by other organizations of the United Nations development system; and (b) funds provided by UNDP for TCDC activities executed by Governments or UNDP itself.

3. Data provided by five organizations which have identified the various sources of funds for their TCDC activities indicate that $57.2 million of the $120 million spent by them on TCDC came from UNDP country and regional IPFs. In addition to this amount, a total of $104.4 million was spent from resources of country, regional and interregional and global IPFs and from the SPR allocations for TCDC activities executed by Governments of developing countries or by UNDP itself.

4. This brings the total amount of UNDP resources allocated to TCDC during 1989-1990 to $161.6 million, compared to $104.9 million reported at the sixth session of the High-level Committee for the 1987-1988 biennium (TCDC/6/2/Add.3, p. 7), an increase of over 50 per cent. These represented 9.6 per cent of all IPF expenditures in 1989-1990, which were $1,673.8 million. The corresponding figures for 1987-1988 were 7.3 per cent out of total IPF expenditures of $1,443.4 million. The breakdown of UNDP IPF expenditures for TCDC during 1989-1990, by geographical regions and by the type of IPF is shown in the table below.

5. Total TCDC expenditures under country IPFs in 1989-1990 under government or UNDP execution amounted to $12.4 million or 0.9 per cent of the total country IPF expenditures of $1,360.3 million. In 1987-1988, this expenditure was $6.5 million or 0.6 per cent of total country IPF expenditures of $1,158.2 million.

6. Total TCDC expenditures under regional IPFs in 1989-1990 amounted to $77.2 million or 29.8 per cent of the total regional IPF expenditures of $259.1 million. In 1987-1988, total TCDC expenditures under regional IPFs were $83.0 million or 37.1 per cent out of total regional IPF expenditures of $223.6 million.

7. Total TCDC expenditures for 1989-1990 under the interregional and global IPFs amounted to $13.6 million or 25 per cent of the total interregional and global IPF expenditures of $54.4 million. In 1987-1988, total TCDC expenditures under interregional and global IPFs were $15.4 million or 25 per cent out of total interregional and global IPF expenditures of $61.6 million.

8. In the Asia and the Pacific region, 0.56 per cent ($2.9 million) of total country IPF expenditures ($526.9 million) were used for TCDC activities in the biennium 1989-1990. TCDC activities accounted for 40.5 per cent ($34.2 million) of total regional IPF expenditures ($84.5 million) for the same period.

9. Eight countries - China, India, Nepal, Pakistan, the Philippines, Sri Lanka, the Republic of Korea and Thailand - have approved specific TCDC projects under their country IPFs to provide catalytic financing for their TCDC exchanges. Most of these projects are of the umbrella type, while others support specific cooperative activities with other identified developing countries. Indonesia and China have developed structured and recurrent TCDC training programmes, and a part of their project funds have been used to facilitate participation in these programmes by trainees from other developing countries.

10. In the Arab States and Europe region, 0.27 per cent ($403,000) of total country IPF expenditures ($149.9 million) were used for TCDC activities in the biennium 1989-1990. TCDC activities accounted for 30 per cent ($6.3 million) of total regional IPF expenditures ($21.2 million) for the same period. This is mainly attributed to support of networking activities. Two countries, Djibouti and Tunisia, have established TCDC umbrella projects financed from their country IPFs. In addition, following Egypt's and Tunisia's TCDC programming exercises in Cairo (July 1988), and Tunisia (April 1987), respectively, two regional projects are being implemented to facilitate the process by which the least developed countries of the Arab States region can tap the capacities of Egypt and Tunisia in meeting some of their technical assistance needs under TCDC arrangements.

11. In the Latin America and the Caribbean region, 0.56 per cent ($7.27 million) of total country IPF expenditures ($133.1 million) were used for TCDC activities in the biennium 1989-1990. TCDC activities accounted for 72.3 per cent ($15.9 million) of total regional IPF expenditures ($22.0 million) for the same period.

12. Ten countries - Argentina, Brazil, Chile, Cuba, the Dominican Republic, Jamaica, Panama, Peru, Uruguay and Venezuela - have established TCDC umbrella projects financed from their country IPFs. The regional programme strategy is to promote TCDC. Regional projects are being formulated and implemented with that focus, particularly those in main programme areas such as technological advancement, critical poverty, self-sustained growth, environment and development.

13. In the Africa region, 0.32 per cent ($1.79 million) of total country IPF expenditures ($550.4 million) were used for TCDC activities in the biennium 1989-1990. TCDC activities accounted for 15.8 per cent ($20.7 million) of total regional IPF expenditures ($131.5 million) for the same period.

14. The TCDC activities funded by the Regional Programme for Africa during the 1989-1990 biennium cover essentially three types of programmes:

(a) Those initiated in the preceding bienniums in support of interregional and intra-African TCDC in areas such as training at the Regional Sugarcane Training Centre for Africa in Mauritius, and TCDC exchanges between sub-Saharan Africa on the one hand and Brazil and Tunisia on the other;

(b) Continued strengthening of regional and subregional institutions, e.g., Preferential Trade Area (PTA), Southern African Development Coordination Conference (SADCC) and Economic Community of West African States (ECOWAS);

(c) Intraregional collaboration fostered through the use of African expertise, and sharing of know-how through the activities of networking arrangements, e.g., the African Regional Pest Management Network (PESTNET) sponsored by the International Centre for Insect Physiology and Ecology (ICIPE), the African Timber Organization (ATO) and the Eastern and Southern Africa Management Institute (ESAMI).

Special Unit for Technical Cooperation among Developing Countries

15. The Special Unit for TCDC continues to spearhead UNDP's lead organization role for TCDC in the United Nations development system. Its major promotional activities during the 1989-1990 period included two orientation and training seminars in TCDC concepts and methodologies, six TCDC programming exercises, five single capacity workshops; catalytic support to eight regional and interregional meetings of relevance to TCDC and the continued development and operation of the TCDC Information Referral System - INRES-South.

16. The two orientation and training seminars, one conducted in Baghdad in February 1990, the other in Islamabad in July 1990, each attended by government officials, managers from semi-governmental and statutory corporations, and locally based UNDP and agencies' staff, dealt in depth with the comparative advantages of the use of TCDC modalities in the formulation and implementation of development projects. In addition, TCDC policies and

procedures continued to be included in the year-round staff training programmes of UNDP.

17. Of the six TCDC programming exercises conducted in the two-year period, three (in Ghana, Indonesia and the United Republic of Tanzania) were multisectoral, while each of three in Argentina, Mexico and India focused on single sectors - maritime, aquaculture and cooperatives, respectively. Details of these exercises are provided in another document before the Committee (TCDC/7/4). While each of the multisectoral exercises matched the capacities and needs of the institutions of the host country with those of the invited countries, the unisectoral exercises moved a step forward by giving the participating countries the choice of identifying TCDC opportunities in any of the other participating countries within or beyond a region that would best suit their needs in the particular sector focused in the exercise.

18. Of the five single capacity TCDC workshops supported during the period under review, one was in Addis Ababa, two in India, one in Cuba, and one in Yugoslavia. The workshop in Addis Ababa, held in December 1989, concerned transfer of technology in small and medium industries. One of the two Indian workshops, held in Jaipur from 24 to 28 September 1990, and attended by participants from 16 developing countries, demonstrated the manufacture and installation of the prosthetic artificial limb, the Jaipur Foot, developed there. The other one, sponsored by the Indian chapter of the non-governmental organization, Grassroots Organizations Operating Together in Sisterhood (GROOTS), and attended by participants from 20 developing countries, was held in Bangalore from 12 to 26 March 1990. It concentrated on the subject of "Decision-making by rural women". The workshop organized by the Government of Cuba in Havana from 2 to 7 October 1990 and attended by participants from 18 developing countries of Latin America and the Caribbean region examined the diverse usages of bagasse and recommended the establishment of a bagasse centre for developing countries in Cuba with corresponding branches in Brazil and Mexico. Through another workshop held in November 1990, Yugoslavia's experience in poultry development was demonstrated to, and shared with, participants from 11 developing countries.

19. Among the eight regional and interregional seminars and meetings of relevance to TCDC supported during the year, two were held in Africa, one in Asia, four in Latin America and one in Western Europe. One of the two meetings in Africa was that of the Action Committee on Raw Materials, held in Abuja in April 1989, under the auspices of the Group of 77; the other was the Third Meeting of Chambers of Commerce and Industry of Developing Countries, members of the Group of 77, held in Harare in November 1989. The International Association of Economic Journalists (IAEJ), a non-governmental organization, organized a seminar in New Delhi, India, in November 1990 on the theme of South/South technical and economic cooperation, attended by economic journalists from 20 developing countries. In July 1989 and again in September 1990, TCDC focal points from developing countries of Latin America and the Caribbean region met in Cartagena, and Caracas, respectively, under the aegis of the Latin American Economic System (SELA) to develop and review TCDC priorities for the region and to negotiate TCDC projects in different sectors.

20. The Fourth Annual Meeting of Chambers of Commerce and Industry of developing countries, members of the Group of 77, was held in Havana in November 1990 and focused on questions concerning removal of impediments to South/South trade, the establishment of an international secretariat for developing countries' chambers, and the creation of a South-South Trade Information Network, and took a number of decisions for action in 1991.

21. The Committee for Commercial and Economic Cooperation (COMCEC) of the Organization of the Islamic Conference (OIC) held its first Meeting of Focal Points for Technical Cooperation among Islamic Countries in Istanbul in March 1990. This was attended by delegates from 21 Islamic developing countries, and made a series of recommendations for the first Ministerial Meeting of OIC, which met in Istanbul in May 1990 to consider those recommendations leading to the strengthening of technical cooperation among Islamic countries.

22. Catalytic support to all these meetings and seminars was among the principal activities of the Special Unit for TCDC, carried out in cooperation with the respective regional bureaux and other relevant headquarters units, and offices of resident representatives during the period under review.

23. INRES-South, in the Special Unit for TCDC, commenced decentralization on an experimental basis with the establishment of "outposted installations" in a number of locations including governmental institutions in Algeria and Tunisia, UNDP field offices in Cyprus, Ghana, Haiti and Iraq, one intergovernmental regional organization (SELA in Caracas) and one United Nations agency (UNIDO). Principal efforts during 1990, apart from the pilot experiment in decentralization, were dedicated to the creation of a CD-ROM version of INRES-South, UNDP's first database to be published in CD-ROM format, and related software enhancements. This has created the possibility of using considerably less expensive hardware and dissemination of the database on a wide basis in developing countries. As a result of introducing the CD-ROM database, which was accompanied by numerous revisions in the INRES-South system, the total number of registered institutions remained approximately 4,100. Updating of the database and a campaign to increase the number of high-quality institutions registered with INRES-South were prioritized for 1991.

24. In addition, pursuant to paragaph 5 of decision 6/2 of the High-level Committee, the Special Unit has begun publication of a quarterly INRES-South bulletin which provides information on its usage and profiles of new institutions registered with INRES-South during the preceding quarter. This publication brings to the development community timely information about the services the computerized information referral system offers, thus helping to promote a fuller use of developing country capacities, particularly within the context of TCDC activities and programmes.

Table

Expenditure during the period 1989-1990 from the use of UNDP funds comprising country, regional, interregional and global IPFs of countries for TCDC activities as compared with IPF expenditure

(In thousands of dollars)

Region	IPF expenditures	Expenditure for TCDC activities	Percentage of expenditure for TCDC activities
Country IPFs			
Africa	550 399	1 787	0.32
Asia/Pacific	526 923	2 944	0.56
Arab States and Europe	149 919	403	0.27
Latin America/Caribbean	133 100	7 271	0.56
Total, countries	1 360 341	12 405	0.91
Regional IPFs			
Africa	131 498	20 727	15.8
Asia/Pacific	84 451	34 224	40.5
Arab States and Europe	21 146	6 344	30.0
Latin America/Caribbean	22 000	15 900	72.3
Total, regional projects	259 095	77 195	29.8
Interregional and global IPFs			
Total, interregional and global projects	54 366	13 592	25.0

Table (continued)

Region	IPF expenditures	Expenditure for TCDC activities	Percentage of expenditure for TCDC activities
UNDP funding for TCDC activities of UNDS organizations		57 154	
TOTAL	1 673 802	160 346	9.6

Note: The total of UNDP expenditures for TCDC from both IPFs and SPR during the 1989-1990 biennium is as follows:

(In thousands of dollars)

Expenditures from IPF funds	160 346
Expenditures from SPR funds	1 234
Total UNDP expenditures for TCDC activities	161 580

7. United Nations Population Fund (UNFPA)

I. Support to promotional and operational TCDC activities

A. Strengthening of countries' capacities for TCDC

Institutional strengthening

UNFPA supported projects that strengthened developing countries' population units, national health and education institutions that executed maternal and child health and family planning, family life education, communication support to promote education for girls, delaying marriage, birth spacing and safeguarding the enviroment. In 1989/1990, funds were allocated: (a) to strengthen the national maternal and child health/family planning projects in Ghana, Equatorial Guinea, Chad, Comoros, Cape Verde, Namibia, China and Viet Nam; (b) to help in establishing population planning units in Burundi, the Gambia, the United Republic of Tanzania and the Democratic People's Republic of Korea; (c) to strengthen the integration of population and family life education into the formal school curriculum in Angola, the Gambia, Senegal and Chad; and (d) to strengthen women's affairs units in Botswana, Mali, Costa Rica, Jamaica and Peru. UNFPA continued to assist the Asia and Pacific Programme for Development Training and Communication Planning (DTCP), working to strengthen the capabilities of countries in the region in training and communication support for implementation of their population programmes.

Networking and information system

UNFPA continued to support projects to develop population information networks in Africa, the Arab States, Asia, Latin America and the Caribbean. For example, in Africa, UNFPA assisted in the linking-up of the population information network of the Regional Institute for Population Studies (RIPS), the Cairo Demographic Centre (CDC), the Centre for African Family Studies (CAFS), the Institut de formation et de recherche demographiques (IFORD) and the Eastern and Southern African Management Institute (ESAMI). The Population Information Network in Africa produced "African Population Newsletter", "POPIN Africa INFO", "POPIN-Africa Scanning Sheet", and the Country Bibliography Series. POPINDEX-Africa, volume 5, was produced in 1989 for distribution to a target audience of population and development professionals and participating centres in Africa. The POPIN-Africa database had been expanded to over 1,500 records. During the last two years, missions were undertaken to Cameroon, Nigeria, Rwanda, Senegal, the United Republic of Tanzania and Zaire to intensify the development of national population information centres (NPICs). In Asia, UNFPA continued the support of the documentation and information programme service of the Clearing-House for Population Education, promoting the development and dissemination of various types of materials related to population education in the Asia and Pacific region.

Networking by population and development specialists and experts in the field of population is another key TCDC promotional activity supported by the Fund. In bringing developing country specialists and experts together for the exchange of technical knowledge, skills and experiences between countries in the same region, UNFPA funded several study tours organized for national experts and officials, for example: officials of the Democratic People's Republic of Korea and the United Republic of Tanzania to go to China, Thailand, Indonesia and the Philippines to exchange knowledge on programme planning and implementation of population policies and the integration of population factors into the national development planning process; for officials of Guinea responsible for the integration of population education in school curricula and mass media programmes to visit more advanced population education projects in Burkina Faso and Mali.

B. Specific activities to promote, identify or formulate TCDC operational activities

Meetings, seminars and workshops

UNFPA assisted in the holding of the African Regional Conference on Options for a Better Life for Young Women, organized by the Family Planning Association of Kenya in cooperation with the Centre for Population and Development (CEDPA); interregional training workshop, organized by the Cairo Demographic Centre; regional training workshop in community participation techniques for women family planning programme managers, and for family planning information, education and communication workers from developing countries, organized by the Planned Parenthood Federation of the Republic of Korea; interregional training workshop on family planning programme management, organized by the National Family Planning Coordinating Board of Indonesia; and the IVth International Congress for Maternal and Neonatal Health in Haiti, organized by the International Association for Maternal and Neonatal Health (IAMANEH).

Feasibility studies and surveys

UNFPA assisted the feasibility study on production of a handbook of population laws of African countries, the Pan-Arab Child and Maternal Health Survey, and the Population Training Needs/Capabilities in the Latin America and Caribbean Region.

Training

UNFPA continued to promote and strengthen training and research activities in population fields in Africa through the Regional Institute for Population Studies (RIPS); training for African journalists in population and development through Inter Press Service; regional training in family health and in fertility management for health personnel in Africa, organized by the Mauritius Regional Training Centre; basic training in population, human resources and development in Africa with fellowships for trainees from

22 African countries, organized by the African Institute for Economic Development and Planning (IDEP).

C. Catalytic support provided to operational TCDC activities

A UNFPA Focal Point Officer went to Indonesia to participate in the TCDC Multisectoral Programming Meeting in Jakarta in 1990, which gave her an opportunity to participate in bilateral negotiations between representatives of Indonesia and 29 other developing countries, resulting in the development of 12 project requests in the field of population and family planning for catalytic supports from UNFPA in the future.

II. Measures taken or planned to strengthen the organization's supportive role in promoting TCDC

In 1990, UNFPA established an internal task force consisting of representatives from functioning branches and divisions of the Fund to strengthten the UNFPA implemention of the TCDC Plan of Action and promote TCDC activities for future catalytic support within the branch and division. The task force members meet regularly under the chairmanship of the Deputy Executive Director (Programme).

III. Use of developing countries' capacities

UNFPA supported the use of developing countries' institutions and expertise in programme review and strategy development missions to 17 developing countries in 1989/1990. Local contraceptive productions were set up with assistance from UNFPA in India, Viet Nam and Indonesia. Research institutions based in developing countries were used by UNFPA in conducting regional studies and surveys, for example, the UNFPA-supported International Islamic Centre for Population Research and Studies at Al-Azhar University arranged seminars in Fez, Morocco and in Sana'a, Yemen, where eminent theologians from Al-Azhar University debated the precepts of Islam on the quality of life of Moslem populations and discussed with the participants the position of Islam towards family planning.

IV. Innovative approach to TCDC

- The use of umbrella project funds, which UNFPA Country Directors have at their disposal of up to $50,000 for hiring developing country's consultants and conducting workshops for programming and monitoring purposes to cover the cost of TCDC project appraisal and monitoring;

- The engagement of national experts for TCDC components in project formulation by UNFPA Country Director - finding ways for retainership of national expertise at field offices;

- The UNFPA Country Directors using his/her decentralized approval authority of $500,000 to approve new projects with strong TCDC components or for supplementary budget requests within certain limits, and for requests for budget revisions of all country projects in order to accommodate the TCDC components that have been neglected in programme and project development in the past.

1989/1990 UNFPA-assisted projects that have TCDC components

National, regional and interregional projects receiving financial support from UNFPA in 1989/90 which contained the elements of cooperation among developing countries or promoting TCDC objectives of self-reliance, mutual support and cooperation by sharing of knowledge and technical expertise among developing countries included the following:

Africa

- Assistance to the National Safe Motherhood Programme in the Congo;
- Assistance in the establishment of Population Planning Unit in Burundi;
- Assistance in the use of microcomputers in the processing of population census data in Mozambique;
- Strengthening the National Maternal and Child Health/Family Planning in Ghana;
- Integration of population and family life education into formal school curricula in Angola;
- Formulation and implementation of population and human resources policies and planning in the Gambia;
- Introduction of population and family life education into the formal education system in the Gambia;
- Assistance to Maternal and Child Health/Birth Spacing Programme in Equatorial Guinea;
- Programme to stimulate national experts, and policy makers' interest in population problems in Côte d'Ivoire;
- Family life education and assistance to women's centres in Madagascar;
- Population information, education and communication activities in Somalia;

- National Population Conference in Kenya;
- Contraceptive Prevalence Survey in Mauritius;
- Strengthening of civil registration and vital statistics system in demonstration areas in Botswana;
- Strenghtening of Women's Affairs Unit in Botswana;
- Introduction of population education into the formal school system in Burkina Faso;
- Assistance to the Family Planning Association in Madagascar;
- Population and housing census in Zimbabwe;
- Support to National Women's Union of Mali;
- Family life education schools in Senegal;
- Strengthening maternal and child health and family planning services and statistics in Comoros;
- Strengthening the Maternal and Child Health and Family Planning Programme in Cape Verde;
- Strengthening of Population Policy and Development Planning Unit in Tanzania;
- Strengthening training in demography at the University of Dar es Salaam in Tanzania;
- Population and sustainable development in Mauritius;
- Women, education, health and employment in Mali;
- Establishment of a Population Planning Unit in Burundi;
- Centre for Research, Training and Information on Women in Development in Addis Ababa University, Institute of Development Research in Ethiopia;
- Strengthening of maternal and child health and family planning services in Chad;
- Population and family life education in Chad;
- Strenghtening of maternal and child health and child spacing in Namibia.

Arab States and Europe

- Establishment of cooperatives for rual women in Er-Rachidia in Morocco;
- Population education and women in development in Morocco;
- Information and communication on health and family planning in Morocco;
- Population development information and communication in Yemen;
- Assistance to the National Institute of Demographic Research and Studies in Tunisia;
- Training of research planners and academicians in methodologies for integrating demographic variables in socio-economic planning in Yugoslavia;
- Assistance in formulation and implementation of national population and human resources policies in the Sudan.

Asia and Pacific

- Population census of the Democratic People's Republic of Korea;
- Establishment of Documentation and Resource Centre for Aurat Foundation in Pakistan;
- Survey on fertility, family planning and health status in Nepal;
- Strengthening maternal and child health and family planning services at the grass-roots level in China;
- Training Programme for Maternal and Child Health and Family Planning Personnel in Viet Nam;
- Institutional strengthening of the University of the Philippines, Population Institute for Technical Assistance in Population Planning;
- Support for population research at the Academy of Social Sciences of the Democratic People's Republic of Korea;
- Strengthening the capability for research in human reproduction and family planning;
- Increasing the quality and coverage of responsible parenthood and family planning service delivery in the Philippines;

- Support for the strengthening of Population Centre in the Democratic People's Republic of Korea;

- Support for establishing population teaching programme at Kim Il Sung University in the Democratic People's Republic of Korea;

- Local production of contraceptives in Viet Nam.

Latin America and the Caribbean

- Improvement of women's health in the coal-mining areas of Chile;

- Establishment of a Regional Centre for Training and Research in Adolescent Reproductive Health at the University of Chile;

- Population and housing census in El Salvador;

- Training and research in population at the autonomous national University of Honduras;

- Training of women in reproductive health, sex education and community development in Uruguay;

- National Conference on Women's Health in Brazil;

- Training for the socio-economic and educational improvement of organized women's groups in Costa Rica;

- Expansion of women's centres in Montego Bay and Brown's Town, St. Ann in Jamaica;

- Support for the formulation of the National Programme for Women in Development In Peru.

Regional projects

- Training for media professionals in population and development issues in Latin America and the Caribbean;

- Regional Meeting on Engendering Adjustment for the 1990s;

- Africa Regional Conference on Options for a Better Life for Young Women organized by the Family Planning Association of Kenya in cooperation with CEDPA;

- Advisory services and training in demographic data collection and analysis in the Middle East;

- Training for African journalists in population and development reporting;

- Support to the 1990 Round of Censuses in the Caribbean through the Caribbean Community (CARICOM);

- Dissemination of population information and media training through Press Foundation of Asia;

- Support to African Committee on Traditional Practices Affecting the Health of Women and Children;

- Regional training for women leaders from developing countries on community development and family planning in the Republic of Korea;

- Regional training programme for family planning information, education and communication workers from developing countries in the Republic of Korea;

- Feasibility study on production of Handbook of Population Laws of African Countries;

- African study tour to China;

- Fellowship programme of the International Institute for Population Sciences in India;

- Population information dissemination and media training in Asia through Inter Press Service;

- Support to the Asian Institute of Management in organizing training workshop on integrating women's component into population programmes in Asia and the Pacific region.

Interregional projects

- The IVth International Congress for Maternal and Neonatal Health in Haiti, organized by the International Association for Maternal and Neonatal Health (IAMANEH);

- Interregional training workshop, organized by the Cairo Demographic Centre.

8. Economic Commission for Africa (ECA)

ECA's activities to promote and support TCDC during the biennium 1989-1990 in Africa

General overview

1. It should be noted that since the mid-1980s ECA has been making a special effort to encourage the use of TCDC as a means of helping to overcome the serious economic difficulties which began to face African countries when the effects of the international economic crisis of the 1980s shook national economies and gravely endangered the development prospects of a great majority of African countries. This concern necessitated the convening of a special session of the General Assembly in May 1986 to discuss Africa's worsening economic crisis. The main feature of the special session was the adoption of the United Nations Programme of Action for African Economic Recovery and Development 1986-1990 (UNPAAERD), which has been the focus of ECA's major technical and substantive activities since that time. This important feature of Africa's development is worth mentioning as it added a new and unexpected dimension which was not present in the basic philosophy of the Buenos Aires Plan of Action. The predominant conditions in 1978 when the Plan of Action was adopted were radically different from those which emerged dramatically as a result of the impact of the crisis of the entire region.

2. Thus, during the biennium 1989-1990, ECA continued to provide its support and collaboration to strengthen and expand the use of TCDC in response to the needs of the countries of the region in keeping with the general lines of its programme of work and the specific mandates contained in resolution 355 (XIV) adopted at the fourteenth session of the Commission on economic and technical cooperation among developing countries and regions. The mandates given to the secretariat in that resolution referred to the following matters:

(a) Intensifying activities to support the national TCDC focal points;

(b) Continuing to incorporate forms of TCDC in the activities of the secretariat's programme of work;

(c) Continuing to put into effect initiatives aimed at disseminating more widely information on TCDC capacities and requirements in the countries of the region;

(d) Intensifying coordination with other bodies and organizations which carry out activities of support, promotion or execution of TCDC projects in the region; and

(e) Continuing to promote joint actions with the other regional commissions for the implementation of interregional cooperation projects.

3. A large part of the work performed during the period covered by this report was aimed at carrying forward the major tasks which ECA had been conducting during the preceding biennium. These activities were undertaken in connection with projects whose financing came from extrabudgetary resources which were aimed at promoting and supporting TCDC in specific sectors as well as ongoing efforts related to the dissemination of information, economic cooperation and integration and the provision of support for initiatives taken by national coordination centres.

4. Finally, during the period in question, ECA also intensified its collaboration with the UNDP Special Unit for TCDC both in respect of the appraisal of the first decade of the implementation of the Buenos Aires Plan of Action, which constituted a special concern at the sixth session of the High-level Committee on the Review of Technical Cooperation among Developing Countries (September 1989) and in connection with activities to support sectoral exercises in subregional, regional and interregional TCDC programming in the fields of agriculture, industry, transport, trade, etc.

Coordination within the United Nations system and with non-United Nations systems promoting TCDC/ECDC

5. The striking progress made with respect to regional TCDC coordination activities during the biennium necessitates special attention in view of the concerns which have been expressed by some member States in this regard.

6. Coordination with non-United Nations systems promoting TCDC/ECDC is mainly reflected in the important aspect of the work of ECA's Multinational Programming Operational Centres (MULPOCs), whose work is the promotion and strengthening of subregional integration groupings, such as the Preferential Trade Area (PTA), among member States of Lusaka-based MULPOC, the Economic Community of West African States (ECOWAS), the Economic Community of Central African States (ECCAS) and the proposed PTA among member States of the Tangier-based MULPOC.

TCDC activities undertaken by ECA/OAU/UNIDO/FAO

7. Consistent with the principles and basic definitions enunciated in the Buenos Aires Plan of Action, TCDC is the responsibility of the Governments of the countries concerned. The organizations of the United Nations system do not carry out TCDC; instead, they confine their efforts to the promotion and support, within their areas of expertise, of the initiatives taken by Governments in this regard. In keeping with this role, ECA in collaboration with OAU, UNIDO, FAO or any other appropriate agency conducts activities to facilitate and permit TCDC among its member States within the framework of its programme of work and, within the various areas covered by that programme, strives to strengthen elements or mechanisms likely to foster TCDC.

8. These promotional and support activities generally form part of specific technical cooperation projects. These projects, which are funded by means of extrabudgetary resources, concerned the following areas of endeavour during the biennium:

(a) Identification of opportunities for cooperation among developing countries or group countries;

(b) Support for the exchange of experiences among developing countries in given areas or sectors;

(c) The strengthening of the countries' institutional capacities to engage in TCDC activities; and

(d) Utilization of the developing countries' existing capabilities in respect of TCDC activities.

A synopsis of TCDC modalities in specific projects

9. Many of the projects conducted during the biennium included activities specifically designed to promote TCDC in terms of one or another of the above-mentioned areas. Although this fact makes it difficult to provide a detailed account of all such activities, some of those in which elements of TCDC were crucial to the achievement of project objectives include the establishment of an African Economic Community by the Year 2000; the Industrial Development Decade for Africa, 1980-1990; the Joint ECA/IOM Return of Skills Programme for Africa; and the Association of Food Marketing Agencies in Eastern and Southern Africa. Details of other such projects are given below.

Project - establishment of a South-South partnership promotion centre

10. The first meeting of the interorganizational Ad Hoc Committee on the centre was held in the headquarters of the ADB in Abidjan from 25 to 27 September 1990. The meeting considered modalities of establishing the centre that could accelerate the African economic integration process through South/South cooperation.

11. The primary objective of the centre is to promote the economic and social development of Africa with the active involvement of the private sector through South/South cooperation as an instrument also for economic integration.

12. ECA, UNIDO, FAO, ADB and UNDP make up the interorganizational Ad Hoc Committee. The meeting considered and agreed on the relevant points that should be taken into account in the course of the finalization of the statutes for the centre. The meeting also took note that UNDP had agreed to finance the preparatory phase of the project up to an amount of $105,790. The meeting felt that because of the magnitude of the exercise, that amount might not be sufficient and agreed on appropriate action to obtain supplementary support through fund-raising missions to economic integration entities in Africa, Asia and Latin America.

13. ECA considers the project to be an important one in its efforts to promote TCDC/ECDC between Africa and other developing parts of the world. It has, therefore, decided to submit it at the 16th meeting of its Conference of Ministers for endorsement by African countries.

Afro-Arab cooperation

14. This project is sponsored by OAU. However, OAU collaborates with ECA and ADB to assist in its implementation. Thus, ECA and the ADB were able to participate in the Inter-secretariat Meeting of Experts held at OAU headquarters, Addis Ababa from 4 to 7 September 1989. The meeting prepared, harmonized and finalized working documents for the eleventh session of the Standing Commission for Afro-Arab Cooperation that was held in Washington, in September/October 1989. The documents prepared, harmonized and finalized by the Inter-secretariat Meeting were in respect of:

(a) Proposed Afro-Arab institution for investment;

(b) Framework agreement on the establishment of an Afro-Arab Preferential Trade Area; and

(c) Preparations for the organization of the First Afro-Arab Trade Fair.

15. In the field of population, the UNFPA regular two-year progress report recognizes the great potential of TCDC approaches in obtaining insights into the population problems and their relation to development cooperation for improving the living conditions of all people. The exchanges of experience and knowlege between institutions of developing countries and their joint analysis, together with UNFPA staff, of problems encountered in culturally and economically similar situations have brought about better understanding and new techniques in population programming.

16. Thus, during the biennium 1989-1990, UNFPA continued to play a catalytic role in assisting countries to develop common projects using the TCDC model of cooperation. In order to strengthen capacities for TCDC, UNFPA continues the support of activities of regional institutions such as the Population Unit of OAU, the Regional Demographic Training and Research Centres at Yaoundé and Accra, the Institute for Economic Development and Planning and the Council for the Development of Economic and Social Research in Africa. UNFPA also continues its cooperation with ECA's Population Division through the project Population Information Network for Africa (POPIN).

ECA/India Rural Technology Development, Demonstration and Replication Centre in Dakar

17. This project forms a logical continuation of the first one (DIRAFO - K39) also funded by the Indian Government in the promotion of rural technology in Africa. However, having completed all the phases in the first project, this second project aims at establishing a demonstration centre which would undertake the demonstration of viable technologies as well as replication of the same technologies by using local raw materials.

18. An intergovernmental expert group meeting on prospects for South-South trade promotion in processed and semi-processed products was held by ECA in Addis Ababa from 2 to 5 October 1990.

19. The meeting deliberated on the following and advanced feasible policies and strategies for their enhancement:

(a) Prospects for trade promotion in processed and semi-processed products between Africa and other developing regions;

(b) The role of South-South trade in promoting experts diversification and development in Africa; and

(c) Intra-African trade potential and possible programme of action for promoting trade among developing countries.

Pan-African Development Information System (PADIS)

20. A major venture by ECA continued to provide effective impetus to TCDC within Africa and beyond, PADIS is concerned with both numerical and non-numerical information and is a decentralized system for the assembly, storage and retrieval of information needed to support developmental activities in Africa. An important activity which is currently under way is the establishment and strengthening not only of PADIS subregional centres, but also of national documentation centres linked to PADIS headquarters in Addis Ababa. Every two years PADIS updates its directory on African experts and consultancy organizations.

21. The Customs and Economic Union Organization of Central Africa (UDEAC) has identified inter alia a number of chemical and pharmaceutical projects which it hoped to implement with the cooperation of the Republic of China. Likewise,the Economic Community of the Great Lakes (CEPGL) is trying to develop its vast peat deposits with a view to augmenting its fuels resources.

Cooperation among developing regions

22. The subject of cooperation among developing regions has been one of concern to the regional commissions of the United Nations as a whole, particularly to ECA. The subject continues to be accorded priority attention during successive meetings of the executive secretariats of regional commissions since the mid-1980s, and this has been reflected in a prolonged and sustained joint effort to design a series of projects aimed at promoting cooperation among the countries of the developing regions in various sectors of prime importance to economic and social development in response to the specific mandates contained in resolution 1983/66 of the Economic and Social Council.

23. Consequent upon the final revision of the selected projects by the executive secretaries at their meeting of February 1989 held at ESCAP headquarters in Bangkok, a number of approaches were made, particularly to UNDP, to secure funds for the implementation of some of these projects. These initiatives did not have the expected results and the subject was therefore discussed again at the meeting of executive secretaries of regional commissions held in April 1989 at ECLAC headquarters in Santiago. At this

meeting, the executive secretaries reiterated their commitment to efforts aimed at securing the minimum resources necessary to initiate a smaller number of projects and agreed to support the undertaking of a project on interregional transport, coordinated by the Economic Commission for Europe, under the general oversight of the Economic and Social Council.

24. In addition to the joint action taken by the executive secretaries to regularly review the subject of interregional cooperation in their periodic meetings of consultation and coordination, ECA has involved itself in one or two specific initiatives in this area:

(a) Consultations between ECA and ECLAC at the level of the respective substantive divisions for the elaboration of a possible joint project for the exchange of experiences in the area of the formulation and implementation of technological development policies, a project which will culminate in the holding of an interregional seminar in 1991;

(b) The participation of representatives of several African countries in the regular courses of the Latin American Demographic Centre (CELADE) which were offered during the 1988-1989 biennium, thus continuing an express policy of the centre in the administration of its fellowship programme;

(c) The participation of ECA in the meeting between the regional commissions and the United Nations International Research and Training Institute for the Advancement of Women (INSTRAW) held in February 1989 at the Institute's headquarters in Santo Domingo. The meeting examined the possible spheres and modalities of coordination and joint programming within the framework of the medium-term plan of INSTRAW for 1990-1995.

Guidelines for action

25. A review of the activities undertaken by ECA in support of TCDC during the biennium 1989-1990 reveals a sustained effort to pursue the implementation of modalities of horizontal cooperation in order to execute the programme of work of the secretariat, the vital importance of TCDC to that programme and to regional cooperation in the broad sense of the term.

26. Activities to promote and support TCDC in the ECA system are directly related to the above-mentioned programme of work whose main priority areas reflect the concerns of the countries of the region in the face of the tasks and challenges posed by economic and social development. This programme would make way for the elaboration of criteria to identify possible sectors or areas in which the contribution of TCDC should be strengthened in order to achieve the objectives determined by the programme.

27. Notwithstanding the above, it must be pointed out that orientation of future work in TCDC, at the operational level, should be towards continuing the modalities of work used by the secretariat, and reaffirming certain basic approaches which should be restated here, such as:

(a) Increased use of extrabudgetary resources for undertaking activities to promote and support TCDC in order to prevent financial repercussions on the resources allocated in the regular budget of the organization;

(b) Increased participation of ECA in the coordination initiatives undertaken in the region to maximize the results obtained by the various regional bodies in this field, both within and outside the United Nations system;

(c) Constant support in coordination with UNDP and other relevant regional organizations for the initiatives taken by countries or groups of countries to pursue TCDC programming at the regional or subregional level in those sectors that are considered priority for their economic and social development.

Conclusions

28. In the overall appraisal and general assessment of the implementation of the Buenos Aires Plan of Action assessing from the year the Plan of Action was adopted, there can be no denial that some degree of progress has been achieved in TCDC. However, that progress has been limited owing to lack of a sustained will and commitment by the international community to support TCDC all the way. There is a compelling need to move away from rhetoric to concrete actions and projects. Resources are required and financial support from the developed countries for TCDC projects is crucial.

29. The move of UNDP to allow sufficient flexibility on its rules and procedures to enable developing countries to make more effective and fuller use of IPFs for TCDC is timely and appropriate.

30. It would be quite useful for TCDC activities to be implemented on a tripartite basis between national governments and interested parties. Regional bodies and organizations should also take a more active role in TCDC.

1. Department of Technical Cooperation for Development (DTCD)

I. Support to promotional and operational TCDC activities

UNDTCD continued its sustained support to TCDC activities mainly in the two ways that it has carried them out in the past: through the United Nations regular programme, and by incorporating TCDC aspects into projects funded from UNDP or other sources and executed by the Department. Under regular programme funds promotion of TCDC takes place through catalytic inputs, such as: workshops, seminars and training programmes which facilitate the exchange of experience and expertise among developing countries, thereby also stimulating networking arrangements. The programme also covers the cost of pilot projects which are designed to test the feasibility of new approaches in TCDC and which serve as demonstration or training centres for personnel from other developing countries.

During the past two years the subjects covered by those activities were as diverse as the sectors of DTCD's competence, with active participation of developing countries from all regions addressing a broad cross-section of issues of central importance to them. For example, workshops were held, inter alia, on: public sector investment, programming and management (Argentina, 1989, attended by 23 developing countries); planning of financial resources for development (Ethiopia, 1989, with 31 developing countries); planning, organization and administration of large-scale demographic and social data collection (Thailand, 1989, attended by 15 developing countries); disability statistics (Malta, 1989, with 29 developing countries); revision of system of national accounts (Brazil, Fiji and Ethiopia, 1990); and on experience in public investment programming and management (El Salvador, 1990, with 6 developing countries). Seminars on: mineral exploration and investment potential West Africa (Côte d'Ivoire, 1989, attended by 18 developing countries); power plant maintenance (Jordan, 1989, with 9 developing countries); management development training modules for project development (Morocco, 1989, with 13 developing countries); and on petroleum exploration in the Indian Ocean (Seychelles, 1990, with 16 developing countries); mobilization of resources for optional water development and conservation (Venezuela, 1990, with 19 developing countries); on improving revenue administration (Zimbabwe, 1990, with 13 developing countries). Symposia on: solar energy applications (China, 1989, with 15 developing countries); water resources management in drought-prone areas (India, 1989, with 19 developing countries); training in software development for public personnel (Jordan, 1989, with 24 developing countries), etc.

Of the gatherings referred to above, a first of its kind was the international training workshop in disability statistics, held in Malta in 1989, and attended by 29 developing countries from Africa, Asia and Latin America, which addressed the problem of lack of a standard survey handbook for data collection and analysis on disablement and sought to strengthen national capabilities to produce and use demographic and social statistics to answer policy-related questions on disablement. Following the workshop, participants

have continued to correspond and exchange materials within and across regions on their work on national registries and also on methods for planning surveys in their own countries, thereby maintaining institutional networking on this topic, including continued communication with DTCD. A future workshop is planned in 1991 in collaboration with UNESCO on survey methods in childhood disability.

DTCD's interregional project INT/82/R92 "Training of statisticians" has continued with its accomplishments with on-the-job training of junior statisticians from developing countries to work in the statistical office of other developing countries, and by sponsoring study tours to developing countries' statistical institutions. To date over 130 developing countries nationals from approximately 50 countries of Africa, Asia and Latin America, and Arab States have benefited. As well, over 30 developing countries institutions have been of assistance.

In Eastern Europe, a regional IPF project RER/87/005 "Computerized coal mining system" with DTCD execution aims at computerized monitoring of coal mining operations with an emphasis on safety and environmental aspects, and has established a network in the seven participating countries to coordinate research, development and marketing of the computer system, with a training centre in Czechoslovakia, fully equipped with microcomputers and telecommunications equipment for demonstration of the monitoring system.

Another example of an IPF-funded project is the new IPF/MDP project KEN/89/010 "National management policy development", which aims at strengthening the Government's capacity for policy formulation and implementation. The project provides for TCDC-oriented modalities in the organization of seminars jointly between the Government of Kenya and other Governments in the eastern/southern Africa subregion reflecting shared resources (teachers, transportation costs and living expenses of participants) by the respective Governments.

Moreover, as another medium to support TCDC, namely programming exercises, DTCD collaborated with the UNDP Special Unit for TCDC in support of the Indonesian Government and 29 other participating developing countries in the multisectoral interregional TCDC programming exercise organized and hosted by the Government of Indonesia in Jakarta, July 1990. In preparation for the exercise, DTCD instructed all project staff located in participating countries to assist Governments in the matching of their capacities and needs with those of Indonesia, and to assist in the formulation of project requests on the basis of their respective capacities and needs, to be submitted similarly for negotiations at the exercise. At the Jakarta gathering itself which it attended, DTCD along with other United Nations entities, donor countries and non-governmental organizations worked closely with the UNDP Special Unit for TCDC, the host Government and the other participating Governments in their efforts for the success of the meeting, including assistance in the negotiations themselves. To the extent possible, DTCD intends to provide catalytic financial support by providing "bridging costs", mainly international travel during the implementation phase of several of the projects agreed upon in the fields of energy, public works and the

handicapped, for which it stands ready, subject to Governments' requests and availability of funds. With its participation at the Indonesia programming exercise, DTCD reaffirmed its policy to assist similar exercises for TCDC exchanges, as it actively supported in several ways in recent years those held in China, Turkey, Tunisia and Egypt.

Furthermore, in response to a request from the Special Unit for TCDC on the possible organization of a training programme on the Jaipur foot technology in the field of physical rehabilitation in the context of TCDC, DTCD enlisted the support of projects on the handicapped which it backstops in several countries of Africa and the Americas. The Department as well continued its cooperation with the Special Unit for TCDC in their preparation of the proposed and much-needed TCDC handbook as a comprehensive source of reference for use by national and international officials, by providing the Unit with relevant comments on the proposed text and also with examples of DTCD activities for their possible inclusion. The Department also attended the TCDC focal points meeting of the organizations of the United Nations development system, held at Geneva in 1990, in which problems of common interest, especially financing of TCDC, were discussed.

II. Measures taken (or planned) to strengthen the organization's supportive role in promoting TCDC

On the basis of the momentum generated through the TCDC interregional, regional and subregional intergovernmental programming exercises that have progressively and steadily been held in a number of countries since 1986, DTCD has actively tried to further TCDC by: (a) continuing to promote and include TCDC elements in its activities through the United Nations regular programme and in projects under its execution, especially at the time of project formulation; (b) being ready to provide direct support, if requested, to the convening of at least one TCDC programming exercise per year, with financial contribution and/or with staff resources; (c) maintaining the focal point arrangment which has been operating over recent years, in order to coordinate the Department's support to TCDC activities; (d) offering technical and advisory services to assist developing countries in the elaboration of TCDC projects in its fields of competence; (e) providing catalytic support to the implementaion of some TCDC projects resulting from the programming exercises in the form of bridging costs, e.g., international air fares for training; and (f) providing headquarters desk-technical support to enhance TCDC activities agreed to between developing countries, which could benefit from DTCD's technical knowledge and experience. In addition, by maintaining close collaboration with all TCDC endeavours of the Special Unit for TCDC in which the Department may be instrumental to assist in the furtherance of TCDC. Furthermore, in view of the forthcoming fifth country programming cycle, DTCD will redouble its efforts to increase awareness of TCDC by its interregional and technical advisers staff, given their meaningful advisory role to developing country Governments in programme design, project identification and project formulation, as well as throughout the implementation phase.

III. Use of developing countries' capacities

On the basis of the policy it has been practising over the years, DTCD continued utilizing developing countries' capacities as follows. In 1989, out of the total of 1,218 appointed experts and/or consultants to DTCD-executed projects, 33 per cent were nationals from developing countries. In 1990, from a total of approximately 1,200 experts and/or consultants appointed, 34 per cent were nationals from developing countries. At the 1990 National Recruitment Services (NRS) Meeting organized biennally by DTCD, the meeting continued to emphasize the need to include qualified candidates from developing countries in the panels submitted to recipient Governments to fill in experts and/or consultants field posts. It also asked for more attention to be given to strengthening the cooperation among NRS of developing countries.

Regarding training, in 1989, a total of 4,044 developing country nationals were placed by DTCD either as fellowships or scholarships, of which 2,169 or 51 per cent were placed in institutions of developing countries. From the preliminary figures available for 1990, a total of 2,687 or 63 per cent were placed in institutions of developing countries, thereby representing a higher percentage in the utilization of such institutional capacities over the previous reporting period which showed 49 per cent in 1988 and 41 per cent in 1987.

On the procurement of goods and services for technical cooperation, the total DTCD procured in 1989 in equipment was $39.6 million, of which $12.7 million, or 32.3 per cent of the total was spent in developing countries. Total budgets for contracts were $6.9 million, of which $2.1 million, or 31.1 per cent was awarded to developing countries' firms. From the preliminary 1990 figures the total procured in equipment for technical cooperation projects amounted to $41.1 million, of which $12.4 million or 30.3 per cent of the total was procured from developing countries. Total budgets for contracts amounted to $10.5 million, of which 24.4 per cent was awarded to developing countries' firms. In addition to the latter, it should be noted that as part of its supportive policy on the use of developing countries' capacities, DTCD adopted in 1990 a set of Guidelines for Short-listing of Contracts and Procurement Service. For bidding purposes, they require of all DTCD Contract and Procurement Officers consideration of developing countries' capacities, along with the capacities of underutilized major donor countries' capacities and other countries when selecting and proposing firms for consultancy services, as well as in the procurement of equipment and supplies for project operations. Accordingly, the guidelines ensure that developing countries' capacities be given an equitable and fair opportunity.

2. Economic Commission for Latin America and the Caribbean (ECLAC)

Section I: Summary assessment

A. Support to promotional and operational TCDC activities

1. During the 1989-1990 biennium, efforts were made to strengthen the utilization of TCDC modalities in the different sectors included in ECLAC's programme of work, with special emphasis on some of them, such as maritime and land transport; mining and water management; information services and development of data banks; trade promotion and some export-related services; frontier integration; social and economic planning and policy coordination. Significant progress was achieved in some emerging spheres of concern to the countries of the region, such as natural disaster prevention, integration of women in development and programming of the 1990 round of population censuses. At the subregional level TCDC activities have continued to be carried out in relevant sectors. In the Central American subregion, mention must be made of sectors like interconnection of electrical systems; and information on women, health and development. In the Caribbean subregion, ECLAC has provided continuous support to cooperation activities in the framework of the Caribbean Development and Cooperation Committee. A special mention can be made of activities in relation to information on patents and integration of population in development planning. Interregional TCDC-oriented activities have also been carried out through joint initiatives with other regional commissions, mainly ECA and ESCAP.

2. The major orientation of the work carried out in the biennium can be summarized as follows: (a) increased use of extrabudgetary resources for promoting and supporting TCDC; (b) active participation of ECLAC in the TCDC coordinating mechanism that has been successfully implemented in the region through concerted actions with other regional organizations and bodies in the field of TCDC, mainly the Latin American Economic System (SELA); (c) continuous collaboration with and catalytic support of national TCDC coordination centres at the request of Governments; (d) active support, in close coordination with the UNDP Special Unit for TCDC, to initiatives taken by groups of countries to pursue TCDC programming at the regional level in specific sectors of high priority for the countries.

3. Promotional and operational TCDC activities have been carried out through TCDC-oriented projects funded with extrabudgetary resources. The following projects (ACCIS identifier, expenditures in 1989-1990 and funding source (trust funds (TF), recipient countries (RC)), were operational during the 1989-1990 biennium, classified according to the major TCDC orientation of the project's programme of work:*

---

* The list of project titles can be found in annex I.

(i) Institution strengthening: RLA/86/029 ($997,000; UNDP); RLA/86/002 ($786,000; UNDP); RLA/88/P61 ($194,000; UNFPA-TF); RLA/88/P08 ($204,000; UNFPA-TF); RFA/90/S08 ($55,000; TF) (Total: 5 projects; $2,236,000).

(ii) Networking: CAM/89/015 ($90,000; UNDP); RLA/88/039 ($211,000; UNDP); PMA/90/S01 ($128,000; UNEP-TF); ITA/87/S79 ($166,000; TF) (Total: 4 projects; $595,000).

(iii) Information systems: RLA/89/001 ($12,000; UNDP); HOL/89/S49 ($60,000; TF); OPS/90/S04 ($29,000; WHO/OPS-TF); IRC/87/S59 ($188,000; TF); IRC/86/S23 ($80,000; TF) (Total: 5 projects; $369,000).

(iv) Strengthening focal points: HOL/89/S47 ($20,000; TF) (Total: 1 project; $20,000).

(v) Meetings, seminars, workshops: HOL/84/S03 ($35,000; TF); HOL/87/S60 ($101,000; TF); ALA/90/S80 ($29,000; RC) (Total: 3 projects; $165,000).

(vi) Studies and surveys: BID/90/S65 ($150,000; IDB-TF); RFA/88/S21 ($203,000; TF); RFA/90/S11 ($201,000; TF); ITA/88/S28 ($577,000; TF) (Total: 4 projects; $1,131,000).

TOTAL during the biennium: 22 projects, $4,516,000.

B. Measures taken to strengthen ECLAC's support to TCDC

4. The general framework of the ECLAC system - which includes the Latin American and Caribbean Institute for Economic and Social Planning (ILPES), the Latin American Demographic Centre (CELADE) and the ECLAC secretariat itself - in this field is the Buenos Aires Plan of Action, but more specifically, its TCDC activities are governed by the mandates issued by the member States of the Commission to the ECLAC secretariat. TCDC has been given a special treatment in the institutional structure of the ECLAC system through a sessional committee specifically devoted to examining cooperation between developing countries and regions. The Committee was established in 1979, at the eighteenth session of ECLAC, and has met regularly during the ensuing regular sessions (1981, 1984, 1986, 1988). The last meeting of the TCDC Committee was held during the twenty-third session of the Commission, held in Caracas from 3 to 11 May 1990. On that occasion the Committee reviewed the progress made in TCDC activities during the previous inter-sessional period and put forward specific mandates to the ECLAC secretariat for the next period. These mandates are contained in resolution 508 (XXIII) (see annex II below).

5. Within this framework ECLAC has carried out several activities to strengthen its capability to provide support to TCDC initiatives at the regional, subregional and interregional levels.

(a) Information services through the Latin American Centre for Economic and Social Documentation (CLADES) which is part of the ECLAC system, aimed at establishing or reinforcing national information networks with intensive utilization of exchanges among the countries themselves (INFOPLAN);

(b) Inclusion of TCDC in ECLAC's programme of work with the purpose of identifying concrete opportunities for possible cooperation among the participating countries, including technical backstopping to TCDC networks;

(c) Technical support and assistance to the annual Regional Meeting of National Directors for International Cooperation, which is organized in the framework of the SELA with UNDP support;

(d) Publication of the periodic bulletin "Cooperation and Development", which disseminates information on TCDC activities carried out by the ECLAC system at the regional and interregional levels. Publication of the bulletin was initiated in 1981. During the 1989-1990 biennium, the following issues were published (in both English and Spanish): in 1989, 28 (February); 29 (July); 30 (October); in 1990, 31 (May); 32 (September) and 33 (December);

(e) Publication, in May 1990, of a bilingual directory for TCDC entitled "Revised guide to technical cooperation among developing countries: supply and directory of institutions" (LC/G.1612);

(f) Coordination with regional organizations which are active in the utilization of TCDC modalities in their respective fields of competence, through regular meetings of a coordinating regional arrangement that has been set up with the support of the UNDP Special Unit for TCDC and the SELA;

(g) Consultation and coordination with the rest of the regional commissions for joint initiatives aimed at promoting TCDC at the interregional level, particularly with ESCAP for the preparation of an UNCTAD-supported project to identify opportunities for increased trade among countries of the Pacific Basin, and with ECA for the organization of an interregional governmental experts meeting on technological development policies.

6. All the above activities are coordinated internally by the Division of Operations, which is the organization's focal point for TCDC in the secretariat. The operational role of the Division in the ECLAC system has made it possible to underline or introduce TCDC elements in the programme of work of the secretariat, particularly in the extrabudgetary projects that are executed by the system.

Annex I

ECLAC: Titles of TCDC-oriented projects operational during the 1989-1990 biennium

(i) Institution building

RLA/86/029	Elaboration and dissemination of new techniques for public policy programming and planning.
RLA/86/002	Support to foreign services in Latin America.
RLA/88/P61	Integration of population in development planning in the Caribbean.
RLA/88/P08	Support to the design and preparation of the 1990 Round of Population Censuses in Latin America and the Caribbean.
RFA/90/S08	Advancement of women in small-scale and microenterprises in the informal sector in Mexico and Venezuela.

(ii) Networking

CAM/89/015	Regional electrical integration in the Central American Isthmus (DIEICA phase II).
RLA/88/039	Design of policies for strengthening technological innovation capabilities in the business sector in Latin America.
PMA/90/S01	Technical cooperation in environmental planning and management in Latin America and the Caribbean.
ITA/87/S79	Natural disasters prevention.

(iii) Information systems

RLA/89/001	Technical cooperation for the development of capital goods industries.
HOL/89/S49	Establishment of a database in selected areas related to women's participation in socio-economic development.
OPS/90/S04	Women, health and development in Central America, Panama and Belize.

ECLAC: Titles of TCDC-oriented projects operational during the 1989-1990 biennium

IRC/87/S79 Technological information in the Caribbean.

IRC/86/S23 Information for development policies and planning (INFOPLAN, phase III).

(iv) Strengthening focal points

HOL/89/S47 Promotion of technical cooperation through linkages among TCDC national focal points in Latin America and the Caribbean.

(v) Meetings, seminars, workshops

HOL/84/S03 Economic cooperation among Latin American and Caribbean countries in the establishment of inland cargo terminals.

HOL/87/S60 Technical cooperation among the countries of Latin America concerning the transport, distribution, marketing and competitiveness of their exports.

ALA/90/S80 Identification of industrial complementation projects.

(vi) Studies and surveys

BID/90/S65 Frontier integration agreement between Argentina and Uruguay.

RFA/88/S21 The impact of subsidies and different systems of control and organization of public urban transport in Latin America.

RFA/90/S11 Technical cooperation among the countries of Latin America and the Caribbean in road maintenance.

ITA/88/S28 Support to Latin American and Caribbean countries in the sphere of economic recovery and development.

Annex II

RESOLUTION 508 (XXIII). COOPERATION AMONG DEVELOPING COUNTRIES AND REGIONS

The Economic Commission for Latin America and the Caribbean,

Recalling the Buenos Aires Plan of Action adopted at the United Nations Conference on Technical Cooperation among Developing Countries (TCDC) held in that city in September 1978 and endorsed by the General Assembly in resolution 33/134 of 19 December 1978,

Taking into account the decisions adopted at the sixth session of the High-level Committee on the Review of Technical Cooperation among Developing Countries, which met from 18 to 22 September 1989 at United Nations Headquarters, New York, and in particular decisions 6/3 and 6/5 addressed to the organs, organizations and bodies of the United Nations system,

Recalling its resolutions 491 (XXII) and 492 (XXII) on technical and economic cooperation among developing countries and regions,

Bearing in mind the results of the meeting of government experts convened by UNDP (New York, 9-20 April 1990) to identify the obstacles to technical cooperation among developing countries and recommend measures for surmounting them,

1. Takes note of the report of activities of the ECLAC system in support of cooperation among developing countries and regions in the biennium 1988-1989, presented by the ECLAC secretariat at this session;*

2. Reaffirms the importance of cooperation among the developing countries of Latin America and the Caribbean at the regional and subregional level as a means of achieving the economic and social development objectives of those countries;

3. Also reaffirms the importance of the role ECLAC msut play in supporting initiatives and actions by the countries of the region aimed at materializing cooperation among developing countries at the subregional, regional and interregional level;

4. Emphasizes the need to continue and intensify the secretariat's efforts to promote and support cooperation among the countries of the region

---

* See the document entitled Activities of the ECLAC system to promote and support technical co-operation among developing countries and regions (LC/G.1611(SES.23/12)).

in sectors which their Governments consider to be of interest and to support and further the existing regional and subregional cooperation systems in those sectors;

5. Requests the Executive Secretary, in accordance with the relevant mandates, to:

(a) Strengthen the links between the ECLAC system and the national government-designated focal points for technical cooperation among developing countries and regions so that the secretariat's activities to promote and support such cooperation will continue to respond effectively to the needs of the countries of the region in those sectors which their Governments consider to be of priority importance for their economic and social development objectives, providing support, when so requested by Governments, for the management capacity as regards cooperation at the national level;

(b) Intensify activities designed to support existing cooperation networks and systems in those sectors in the region, facilitating and promoting the exchange of cooperation experience in order to improve the management capacity for cooperation among the countries of the region;

(c) Continue with activities designed to back up the dissemination of information on opportunities and initiatives for cooperation among developing countries at the regional and interregional levels;

(d) Continue and further expand activities aimed at identifying and incorporating operational forms of technical cooperation among developing countries in the various sectors of the programme of work of the ECLAC secretariat, with special emphasis on those forms which permit, where appropriate, the participation of both governmental and non-governmental agents of cooperation;

(e) Collaborate with initiatives and mechanisms for coordinating the work of bodies and organizations which carry on activities in the region relating to projects for cooperation among developing countries, so as to consolidate the progress already made in these matters and help to improve the efficiency and efficacy of such activities;

(f) Continue to give support to the regional programming exercises in technical cooperation among developing countries in sectors of priority importance to the countries, which are sponsored by the United Nations Development Programme in coordination with the Latin American Economic System;

(g) Continue to collaborate with the Permanent Secretariat of the Latin American Economic System in the preparation of activities with the national focal points for technical cooperation among developing countries within the scope of their respective mandates, especially in the case of activities connected with the annual Meetings of National Directors of Technical Cooperation;

(h) Step up joint action with the other regional commissions for the formulation and execution of projects to promote technical and economic cooperation among countries of the various developing regions, taking as the basis for this the initiatives already taken in this field among the regional commissions in recent years, in consultation and coordination with the relevant organizations of the United Nations system.

243rd meeting
11 May 1990

3. Economic and Social Commission for Asia and the Pacific (ESCAP)

Section I: Summary assessment

A. Support to promotional and operational TCDC activities

During the period under review, ESCAP jointly with other United Nations agencies, and the intergovernmental and non-governmental organizations continued its efforts to support TCDC initiatives and activities of members and associate members. Most of the promotional TCDC activities of ESCAP were implemented in the form of meetings, workshops, seminars, symposia, study tours and/or seminar-cum-study tours. There were undertaken in the areas of food, agriculture and rural development, environment, human settlements, development issues and policies, industrial development, international trade, development finance and tourism, natural resources, energy, population, science and technology, statistics, transport (transport and communication, shipping, port and inland waterways), social development and transnational corporation.

As shown in the enclosed table of section II, there were altogether 356 promotional TCDC activities at the total cost of approximately $38.74 million implemented in these areas as compared to 64 operational TCDC activities supported at a relatively lower cost of $303,119. The provision of in-country cost and the effective functioning of the national coordinating and administrative machinery of the developing countries continued to be the main impediments to the expansion of operational TCDC activities.

As to the utilization of the developing countries' capacities through recruitment of experts/consultants, placement of fellows, award of contracts, and procurement of equipment and supplies, all showed an upward trend in relative terms.

4. United Nations Centre for Human Settlements (Habitat)

I. Support to promotional and operational TCDC activities

UNCHS views national capacity-building as a fundamental objective and function of its activities. Conversely, existing national capacity is regarded as the basic resource from which to draw to implement human settlements technical cooperation activities. Since TCDC has been conceived by UNCHS as constituting the essence of its mandate, it has not established separate activities to implement TCDC, but rather seeks to integrate TCDC modalities within the framework of UNCHS (Habitat) technical cooperation activities.

The following are some examples of such integrated TCDC promotional activities.

- The Urban Management Programme, INT/86/006, a joint UNDP/UNCHS/World Bank interregional project, is an example of a programme which has been specifically designed to strengthen the capacities of developing countries to engage in TCDC activities of an operational nature. The programme is providing both developing country Governments and external support agencies with policy alternatives, investment choices and technology options derived from case study research undertaken by developing country experts. Within this framework, a workshop was held in Nairobi in September 1990 on capacity-building in municipal governance, land, infrastructure, municipal finance and the urban environment. Participants in this workshop were representatives of regional and subregional networks of research and training institutions, Governments and non-governmental organizations. The Nairobi workshop also considered, inter alia, the specific request of the Mayors of the Economic Community of West African States (ECOWAS) for assistance in the preparation of the framework of an association of ECOWAS capital cities and for administrative support to its secretariat. UNCHS is helping the proposed association to get started and in the definition of what assistance might be most strategic.

- In a related development, the UMP held in August 1990 the organizational meeting to launch the Asia Regional Staff Exchange Programme for Urban Management (RAS/89/008). Senior-level representatives from six of the eight participating Asian countries met in Singapore to discuss the specific subject areas as well as the modalities and timetable for the exchange of staff which will be further supported by the programme during 1991.

II. Measures taken (or planned) to strengthen the organization's supportive role in promoting TCDC

UNCHS is not a funding agency and is, therefore, in no position to allocate resources a priori for TCDC activities. It does, however, whenever possible and acceptable to its clients, promote the concept of TCDC in projects assigned for its execution and in addition assigns a sizeable share of its regular budget resources for the organization of global and regional meetings, seminars and workshops aiming at expanding the interchange of experience among developing countries. The TCDC modality is viewed by UNCHS as a vehicle for enhancing awareness of the potential inherent in successful experiences. This is not only a statement of principle but a strategy which has been increasingly adopted in particular as a tool for project and programme formulation. The initial transfer of a successful country experience is viewed by UNCHS as an excellent instrument for highlighting the importance and potential impact of the specific policy option or implementation strategy being transferred and therefore as a valuable catalyst for mobilizing financing from multilateral, bilateral and national resources.

The Coordinators of the four geographic units of the Technical Cooperation Division have been assigned to act as focal points for TCDC activities, since they are in the best position to respond to requirements from the field and establish appropriate liaison with UNDP and other funding agencies. Regional and subregional training activities with the participation of all levels of public sector officers, non-governmental organizations and CBOs are permanently being conducted by UNCHS with institutions based in developing countries. In fact, capacity-building within local training institutions (the training of trainers) constitutes the core of the Centre's training programme and developing country case studies constitute the basis of these training materials. UNCHS also provides fellowships and sponsors study tours in training institutions in developing countries and encourages the formation of regional and subregional networks of training institutions.

Some of the latest UNCHS publications which directly support TCDC are:

- The Global Report on Human Settlements
- 1989 Project Information Report
- Directory of National Research Organizations in Construction Materials and Technologies in Developing Countries
- Information and Documentation Centres in the Field of Human Settlements
- Ministries and Governmental Institutions in the Field of Human Settlements
- Firms and Institutions Providing Consultant Services in the Field of Human Settlements

III. Use of developing countries' capacities

The Centre operates with an extensive roster of expertise with heavy developing country representation. Moreover, the Executive Director of UNCHS and a large proportion of UNCHS senior staff members are developing country nationals, as is the majority of the consultants and project personnel recruited. In 1990, for example, UNCHS hired, within the framework of its technical cooperation activities, a total of 324 national experts and consultants, or 61 per cent of the total number of experts and consultants recruited by UNCHS during the year.

UNCHS's record for the procurement of equipment and subcontracts (close to 60 per cent from developing countries) is amongst the top four agencies in the United Nations system, which further illustrates its commitment to TCDC modalities as the means to provide more innovative, relevant and cost-effective technical cooperation.

IV. Innovative approaches to TCDC

Among the new approaches regarding the development of TCDC activities mention should be made of the establishment of a comprehensive database on expertise available in the field of human settlements in developing countries and the design and execution of the above-cited regional programme for the Asia and Pacific region (RAS/89/008) entitled "Regional staff exchange programme for urban management", funded by UNDP, which is built upon the TCDC modality to promote horizontal capacity-building. The project is providng on-the-job learning/teaching and information exchange to about 100 senior and intermediate-level staff in various countries in Asia through staff exchange between ongoing urban management programmes in these countries. In view of its success, UNCHS also hopes to replicate this project in other regions as well.

5. United Nations Industrial Development Organization (UNIDO)

Summary assessment

As the lead United Nations organization for industrial development UNIDO focuses its activities on the industrial development of the developing countries through technical assistance, subregional, regional and interregional activities. In its medium-term plan, ECDC and TCDC have been singled out as an element common to industrial development, especially with respect to five thematic programmes, namely human resource development, development and transfer of technology, industrial rehabilitation, small and medium-scale industries and environment and energy. Consequently, ECDC and TCDC are implicit in many programmes and activities. This report presents those activities with ECDC and TCDC components undertaken by the organization during the reporting period (1989-1990).

I. Support for promotional and operational TCDC activities

Technical assistance to developing countries in various sectors in order to strengthen their capacities to engage in TCDC activities. They covered, inter alia, establishment of centres for industrial maintenance, spare parts and hand tools, pesticide development, pharmaceutical research, synthetic fibre, petroleum refining and petrochemical and technological information services.

Organization of regional and interregional meetings, seminars, workshops and expert groups on various sectors, aimed at promoting industrial cooperation, joint venture, transfer of technology, exchange of experiences and provision of equipment and expertise. They covered, inter alia, machine tools, agro-related metalworking, small-scale foundry industry, utilization of medicinal plants, fertilizer technology, wood based panels, telecommunication industry, petrochemical research and development, information system and fisheries industry.

Implementation of group training programmes to promote transfer of technology and exchange of experience. In Turkey, training programmes were organized in the utilization of medicinal and aromatic plants in the pharmaceutical industry, fruit and vegetable processing, cement and sugar industries, small-scale foundry operation, iron and steel industry, and fellowship in petrochemicals. In China, programmes focused on diesel engine repair and maintenance, design and manufacture of medium and small-size agricultural machinery and implements and fly ash utilization; in Romania, training on reconditioning and repair of spare parts and components for agricultural machinery.

In addition, UNIDO contributed to the organization of study tours (cement industry, medicinal plants, telecommunications industry and machine tools) elaboration of feasibility studies (oil extraction, rehabilitation of a cereal plant, production of bone meal, establishment of a textile factory and production of modern wooden boats).

II. Measures taken (or planned) to strengthen the organization's supportive role in promoting TCDC

In the Africa region TCDC is aimed at promoting intra-African industrial cooperation with development of a mutually complementary technological infrastructure in specialized fields (setting up of an African Iron and Steel Association, support to a standing committee on processing of raw materials, establishment of industrial free zones). As part of the Industrial Development Decade for Africa programme, TCDC activities will concentrate on regional and subregional enterprises and institutions and support services that will involve Africa's industrial capacity. In connection with the proposed African Economic Community, UNIDO's TCDC responses emphasize training, study tours and consultancy services, and joint studies and project promotion relating to pre-investment activities. In the Arab region, UNIDO is promoting intra-Arab region industrial cooperation, especially through the small- and medium-scale industrial sector. In the Asia and Pacific region, regional information and cooperation will be developed in specific subsectors such as plastics processing and manufacture of automotive components. For Latin America and the Caribbean, the major TCDC initiatives will be taken in the context of five subprogrammes, particularly in the industrial automation of the capital goods industry.

A copy of the information referral system for developing countries' TCDC capabilities, INRES-South was acquired from UNDP and agreement signed under which UNIDO will examine, upgrade and extend its industrial TCDC capacities in the form of training and research. Inventories of industrial capabilities for TCDC of Brazil and Romania were published. Two more such inventories for Turkey and Egypt are being prepared.

At the request of the Industrial Development Board, a regulatory framework for the ECDC and TCDC component of the UNIDO programme was drafted and will be submitted to the Board for examination and approval. The framework is intended as a stimulant to greater use of ECDC and TCDC mechanisms in programming and project formulation, design and implementation.

III. Use of developing countries' capacities

UNIDO continues to make all possible efforts to increase the use of resources from developing countries by awarding contracts to their organizations and institutions and by hiring their experts. Efforts were also made to ensure that, to the maximum extent possible, bidder lists included companies from developing countries. Results of 1989 and 1990 are as follows:

Year	Total contracts awarded	From developing countries				
		No. of contracts	No. of countries	Value (in ml $)	% of total contracts	% of total value (in ml $)
1989	185	69	34	3.6	37	18.7
1990	204	75	41	4.2	36.8	21.6

Similar efforts were made on the equipment purchasing side. Nevertheless, with developing countries needing increasingly sophisticated equipment, much of what they require is not available in developing countries, or if available, is often not serviced in the recipient countries. For 1989, 22.3 per cent of equipment orders were placed with vendors and manufacturers in developing countries, i.e., 741 orders out of 3,315 valued at $6.7 million (16.7 per cent of the total $40.1 million). For 1990, 28.7 per cent, i.e. 852 orders out of 2,966 valued at $8.9 million (20.7 per cent of the total $43 million).

During 1989, 469 candidatures from developing countries were submitted by Governments (27.6 per cent of the total). A number of 678 experts from developing countries, including national experts, were appointed (31.8 per cent of the total). During 1990, 891 nationals from developing countries were recruited. They represent 36 per cent of all experts and consultants who received employment contracts.

Innovative approaches to TCDC

Solidarity meetings in the industrial development of the least developed countries constitute a useful mechanism whereby the more advanced developing countries could examine, discuss and agree to help implement specific projects in the host country on agreed terms. Although the main responsibility for implementing the projects lies with the cooperating partners themselves, UNIDO continues to monitor and, in some cases, assist in the follow-up activities within the limits of available funds.

Within its TCDC programme, UNIDO continues to develop TCDC projects through organization of meetings and workshops which either focus on a specific or general sector. For example, the workshop on the industrial utilization of medicinal plants held in China last year was not only an occasion for exchange of experiences and information. It was also a forum during which the participants could identify and agree on specific areas for cooperation and on follow-up activities.

UNIDO has initiated with some developing countries a special trust fund arrangement as a mechanism through which UNIDO and the donors could identify and develop projects for cooperation among developing countries.

Table 2

6. United Nations Volunteers programme (UNV)

I. Support to promotional and operational TCDC activities

UNV makes every effort to facilitate the direct involvement of developing country representatives in meetings which result in a greater awareness of the potential of those countries to mobilize national volunteer resources for assignment in other developing countries. Thus, during the course of 1990 at a UNV Consultative Meeting on Volunteer Service and Development, participation was arranged at the government level from Brazil, China, Cuba, Egypt, Ghana, India, Indonesia, Jordan, Morocco, the Philippines, Thailand, Tunisia and Zaire. Non-governmental organizations from Brazil, Haiti, India, Nigeria and Peru also participated in a Special Consultation on Volunteer Participation in Working with the Urban Poor. These meetings, by bringing together developing country government and non-governmental organization representatives, encourage the exchange of experiences and the exploration of ways of promoting international volunteerism.

II. Measures to strengthen the organization's supportive role in promoting TCDC

Around 87 per cent of the totality of UNV's Special Voluntary Fund general contributions and interest, totalling approximately $1.1 million in 1990, are allocated to meet external costs of United Nations Volunteers from developing countries, which compares with the 10 per cent earmarking laid down in recommendation 5 of the Buenos Aires Plan of Action.

As far as strengthening focal points is concerned, arrangements for the channelling of volunteer manpower through UNV were established in 1990 through agreements in the cases of Egypt, Jordan, Morocco, the Republic of Korea and Viet Nam to add to those already established with China, Cuba, Ghana, India, Myanmar and Zaire. Further such agreements are anticipated in 1991.

III. Use of developing country capacities

Around 87 per cent of the 2,000 serving UNVs originate in the developing world: 49.2 per cent from Africa; 31.5 per cent from Asia and the Pacific; 7.3 per cent from Latin America; and 12 per cent from Arab countries. All volunteers assigned under UNV's Participatory Development Programme (PDP) are drawn from the developing region in which they serve. The main constraint in increasing further the percentage of developing country nationals serving as UNVs outside the UNV's PDP operations is the principle of universality which underlies the programme and which requires that UNV make efforts to balance the recruitment sources of volunteers it fields. Nevertheless, as the demand for UNVs grows, it is anticipated that the pressure on the supply side for well-qualified developing country nationals to serve as UNVs will continue to grow. In this context it should be noted that the number of serving UNVs from developing countries increased from 1,594 in 1989 to 1,786 in 1990 when a

total of over 20,000 volunteer months from developing countries was delivered.

Another example of UNV'S increasing use of developing country capacities is the extent to which developing country nationals are now being recruited as consultants both locally and internationally to undertake evaluation exercises for the programme.

For its periodic Inter-Governmental Meetings (IGM), UNV has always elected to ensure the venue is in a less developed country. Thus, in 1982 the IGM was held in Saana, Yemen, in 1986 in Maseru, Lesotho, and the next IGM towards the end of 1991 is planned for Nepal. This measure has facilitated a fuller participation of developing countries than would otherwise have been the case and has helped underline the capacity that least developed countries have to host such gatherings.

IV. Innovative approaches to TCDC

UNV's PDP is concerned with strengthening grass-roots-focused government and non-governmental organization programmes through exchanges of experience, skills and knowledge in promoting self-help initiatives at the community level. UNV is currently exploring mechanisms for local organizations participating in the programme to assume responsibility for the management of such exchanges which will involve a degree of training to ensure adequate institutional capacity to handle the exchanges.

On the broader front, UNV is committed to exploring means by which the UNV modality, encompassing contractual periods of three months and above, can be utilized to facilitate the transfer of technical know-how between developing country institutions. In this respect, an arrangement between UNV and INRES-South needs to be developed whereby suitable partners for collaboration can be identified and a plan of action drawn up.

Finally, UNV is currently undertaking a survey of repatriated UNV specialists which should help to ascertain the extent to which they have brought home new skills, awareness and understanding as well as the degree to which they play an advocacy and networking role in terms of their former countries of assignment. The survey should reveal ways of strengthening links between the sending and receiving country that extend beyond the UNV assignment itself.

Organization: UNITED NATIONS VOLUNTEERS

SECTION III

Statistical Summary

Utilization of the Capacities of Developing Countries in

Programmes and Projects of the UN Development System

1 January 1988 - 31 December 1990

UNV

Total Provided		Recruited from Developing Countries			
W/M	US$ '000s	W/M	US $ '000s	% of Total US $	% of Total $ US
23.000	41.400.00	20.000	36.000.000	87	

Fellowships

Total Provided		Placed in Developing Countries			
W/M	US$ '000s	W/M	US $ '000s	% of Total US $	% of Total $ US

Equipment

Total Provided		Purchased From Developing Countries			
US$ '000s		US $ '000s		% of Total US $	% of Total $ US

Subcontracts

Total Provided		Awarded to Institutions/Firms of Developing Countries			
Number	US$ '000s	Number	US $ '000s	% of Total Number	% of Total $ US

7. World Food Council (WFC)

In the last two years WFC has retained its focus on the policy issues it had identified in previous policy studies, including the conceptualization of TCDC and financing of such operations. Through extensive exchanges of views and opinions at its ministerial sessions as well as frank discussions during several regional consultations, the Council reached general agreement on the approaches to these issues. In the Cairo Programme of Action and the Bangkok Recommendations adopted at the fifteenth and sixteenth ministerial sessions, held in 1989 and 1990, respectively, member countries of WFC committed themselves to work both individually and collectively to achieve the hunger reduction goals they had set for themselves. Among the actions they undertook to take were specific measures aimed at strengthening TCDC operations, particularly those in the areas of food production, agro-industries and institution building. The approaches recommended by WFC regarding some main issues encountered in applying TCDC modality are summarized below.

I. Refining the concept of TCDC

During the reporting period WFC has continued to voice concern over the concept of TCDC as is defined now. It has noted that there exist different understandings of TCDC and confusion has arisen over the classification of projects under this category. In addition, criteria and standards governing TCDC operations, particularly those regarding partnership, terms of cooperation and financing, have not been fully developed.

In face of such a situation WFC has urged the United Nations development system to renew its effort at upgrading the conceptualization of TCDC with a view to integrating TCDC into the mainstream of development thinking. The Council has repeatedly emphasized that only when this theoretical constraint is removed will TCDC as an effective development cooperation modality be brought into full play. The Council is encouraged to notice that initial steps in this direction have been undertaken by some multilateral development agencies.

II. Strengthening TCDC focal points

Another issue that has been cause for concern for the Council during the reporting period is the position of TCDC focal points at the national level and within the United Nations development system. WFC maintains that given the deficiencies in the institutional structure of TCDC, there is an urgent need to strengthen the position of TCDC focal points within the government bureaucracy as well as multilateral development agencies. In this connection, the Council has recommended that TCDC focal points function at once as project initiator, transmitter and supervisor. It has on many occasions urged Governments and multilateral agencies to undertake specific measures to boost the position of TCDC focal points so that they could fully and effectively participate in project identification, formulation and implementation.

III. Financing TCDC operations

Inadequate financing remains a serious obstacle to the successful implementation of TCDC projects and on wider application of this modality. On this matter WFC has often pointed out that while the main responsibility of financing TCDC operations rests with developing countries themselves, developed countries should take active measures to provide financial and technical support to such operations. To this end the Council has advocated tripartite cooperation agreements as an effective approach. At its fifteenth ministerial session, held in Cairo in May 1989, the Council once again called on developed countries and international organizations to take concrete measures to render such assistance to developing countries. In addition, during the period under review, the Council has also stressed on several occasions that the integration of the TCDC concept into mainstream development thinking would help channel resources to TCDC projects and has urged development agencies concerned to initiate action in this direction.

IV. Role of women in TCDC

The role of women in development and to some extent in TCDC has been gaining increasing prominence in development thinking. During the reporting period WFC has continued its effort at encouraging Governments and the United Nations development system to further involve women in TCDC operations. However, the Council has noted that the dual features of women's status in many developing societies, i.e., their continued marginalization in the social hierarchy on the one hand and their preponderant role in attending to the daily needs of the family on the other, have not been fully taken into consideration in project formulation and execution. In many cases this has led to failure to translate project emphasis on women into concrete results.

In order to remedy this situation, the Council has called on Governments and development agencies to strengthen institutions specializing in women. The Council has suggested that TCDC projects involved in human resources development and institution building include, whenever feasible, a component related to women. In doing so women's views and opinions should be sought and their knowledge and skills utilized. The Council has further identified food production and agro-industries as areas where women's potentials have been left largely untapped, and has urged Governments and development agencies concerned to work out effective ways and means whereby women's contributions to development could be realized.

8. World Bank

As you know, the Bank provided loans and credits to its member countries which they use to procure goods and services required for the implementation of projects. All member countries, as well as Switzerland and Taiwan, China are eligible as sources for procurement. For FY1990, (1 July 1989-30 June 1990), the World Bank disbursed a total of $9,719 million for equipment, civil works, consultants and others. Of this, $6,920 million (71.2 per cent) were disbursed to what is referred to in Bank's nomenclature as Part I (or developed) countries, and $2,799 million (28.8 per cent) to non-Part I countries. This amount covered the procurement of equipment for $732 million, civil works for $235 million, consultants for $77 million and all other goods for $1,753 million. It is also worth noting that of the amount of $518 million disbursed to consultants to Part I countries, some was used to pay for partnerships with firms from Part II countries but, unfortunately, the Bank is unable to determine the size of such payments. In the Bank's view, these figures represent the closest form of TCDC that it is able to document.

The Bank hires consultants directly under its administrative budget or under financing from external sources (UNDP and trust funds). In FY1989, for which figures are now available, the Bank made 7,108 appointments of individual consultants for a total number of a little over one quarter of a million days paid. During that year, 63.75 per cent of paid days were made to consultants from Part I countries and 36.25 per cent of paid days made to consultants from Part II countries.
